\$57.2B

Global digital health funding. Record year.

Digital health startups pulled in a record-breaking \$57.2B in funding in 2021, up 79% from 2020 totals. Funding in all geographies hit record levels in 2021, fueled by the growing need to provide digital solutions and delivery models to patients during the pandemic.

154

Mega-rounds (\$100M+).

In 2021, the number of mega-rounds (\$100M+) to digital health startups nearly doubled to 154. Mega-rounds accounted for the majority (57%) of total funding in Q4'21 – the second-highest quarter ever after Q1'21 (61%). 80% of the top 10 mega-rounds were to companies based in the US.

\$37.9B

US funding. The highest on record.

The US digital health market continues to dominate, reaching a record \$37.9B in 2021. US funding hit \$10.8B in Q4'21 alone – more than the second-largest global market, Asia, recorded in all of 2021 (\$10.7B). US deal count dropped to 303 in Q4 – the lowest on record for 2021. This comes as smaller financings were overtaken by mega-rounds, which accounted for 63% of total US funding in Q4'21.

3X

Median late-stage deal valuation increases.

Late-stage digital health startups are closing much larger deals at much higher valuations. The median late-stage deal size increased 87% from 2020 levels to \$73M in 2021. At the same time, median late-stage deal valuation jumped to \$1.5B, nearly 3x 2020 levels.

15 mos.

Median time between Series C and D raises shrinks.

Digital health startups are taking less time than ever to progress from mid- to late-stage financing. Moving from Series C to D, which took 22 months in 2017, has taken only 15 months (at the median) in 2021. Companies at later stages are progressing even more rapidly.
